

CLAIMS

What is claimed is:

1. A table comprising:

a table top having a top surface and a bottom surface;

a mounting structure centrally disposed on the bottom surface of the table top, wherein a unitary storage space is formed around the mounting structure on the bottom surface of the table top;

a support assembly at least partially connected to the mounting structure;

and

a frame assembly comprising:

a first leg connected to the bottom surface of the table top; and

a support brace having a first end and a second end, the first end being attached to the first leg and the second end being attached to the support assembly.

2. The table as recited in claim 1, wherein the mounting structure comprises a pair of C-shaped mounting ridges formed on the bottom surface of the table top.

3. The table as recited in claim 1, wherein the support assembly comprises:

a pair of spaced apart side rails configured to be attached to the mounting structure; and

a first cross bar disposed transverse to the pair of side rails and attached therebetween.

4. The table as recited in claim 1, wherein the support assembly comprises:

a pair of spaced apart side rails configured to be attached to the mounting structure; and

a pair of spaced apart end rails disposed transverse to the pair of side rails and attached therebetween.
5. The table as recited in claim 1, wherein the support assembly is formed integrally with the table top.
6. The table as recited in claim 1, wherein the table top is formed of blow-molded plastic.
7. The table as recited in claim 1, wherein the mounting structure is formed of blow-molded plastic.
8. The table as recited in claim 1, wherein the frame assembly further comprises a pair of spaced apart side rails and a pair of spaced apart end rails disposed transversely to the pair of side rails and connected therebetween, wherein the table leg is connected to one of the pair of end rails.

9. The table as recited in claim 1, wherein the frame assembly further comprises:

a second leg connected to the bottom surface of the table top; and

a second support brace having a first end and a second end, the first end being attached to the second leg and the second end being attached to the support assembly,

wherein the unitary storage structure is configured to receive at least a portion of the first leg and at least a portion of the second leg when the first leg and the second leg are in a folded position.
